# INFRA NETWORK SERVICES

# Infra Network Services

## Our Services

Telkominfra delivers end-to-end infrastructure network services that cover the complete telecommunications infrastructure lifecycle, from initial network planning and deployment through optimization, ongoing operations, and maintenance support.

Our service portfolio includes both active infrastructure (base stations, microwave links, antennas, core & data network elements) and passive infrastructure, supported by regular preventive maintenance and responsive field corrective actions. We also manage critical site operations including spare part handling, site security, fuel logistics, and remote network supervision through our 24/7 Integrated Operation Center (IOC), ensuring high availability and operational continuity across all sites

## Advantages

- We provide fully integrated network services covering planning, deployment, optimization, operation, and maintenance—across RAN, transport, and core domains.
- Our services are executed by certified technical experts, combining field experience with deep domain knowledge to deliver tailored solutions with precision.
- We ensure operational excellence through structured project management, accurate diagnostics, and proactive maintenance methodologies.
- With a 24/7 Integrated Operation Center (IOC), we offer network & service real-time monitoring and demarcation, enabling high network & service availability and rapid issue resolution.
- Our holistic approach encompasses both active and passive infrastructure, including spare part management, security, fuel logistics, and end-to-end site support.

## Our Scope Of Work

- Deployment :
  - Network Planning, NW Deployment, NW IT Solution
- Operation :
  - NW Optimization, NW Reengineering, NW Operation & Maintenance, Network & Service Operation Center, Sparepart Management

- **NW Planning**  
RAN, Transport & Core Network Planning
- **NW Deployment**  
RAN, Transport & Core Network Deployment
- **NW IT Solution**  
Solutions IT Tools for Telco
- **NW Optimization**  
Network Quality Optimisation
- **NW Reengineering**  
Network dismantle & relocation
- **NW Operation & Maintenance**  
RAN, Transport & Core network maintenance
- **Sparepart Management**  
Network Spare Parts Management

## WHY CHOOSE US

In the Mobile Broadband era, Telkominfra continuously focuses on delivering the best solutions to improve end-users experience. Our best solutions include helping mobile

operators to obtain the maximum benefit of network deployment, reducing TCO (total cost of operation) as well as improving network efficiency.

# Infra Network Services - Deployment

## NW Planning

Network Planning serves as the foundation for building high-quality telecommunications infrastructure. Telkominfra provides strategic planning services to ensure optimal coverage, capacity, and performance, tailored to the specific growth needs of mobile operators.

### Service Offered :

- Coverage and Capacity Planning
- Site Survey and Selection
- Frequency and Parameter Planning
- Network Topology Design
- Radio Access and Transport Planning

### Advantages :

- Reduces CAPEX through strategic planning
- Supports multi-technology networks (2G/3G/4G/5G)
- Expertise in end-to-end planning services
- Backed by professional engineers and advanced tools

### Scope of Work :

- Identifying optimal site locations
- Conducting technical surveys
- Designing network layout and parameters
- Providing simulation and modeling for accurate forecasting

## NW Deployment

Telkominfra's Network Deployment service ensures fast, reliable, and cost-effective implementation of telecommunication infrastructure. Our services includes hardware provisioning, installation, commissioning, and acceptance processes.

### Service Offered :

- Site Installation and Integration
- Antenna and Radio Equipment Deployment
- Project and Quality Management
- Testing and Commissioning
- Acceptance Certification

### Advantages :

- Fast rollout with quality control
- Nationwide deployment capability
- Scalable to support multi-vendor environments
- Efficient project execution with minimal downtime

### Scope of Work :

- Coordination with vendors and local stakeholders
- Installation of base station and transport equipment
- On-site testing and troubleshooting
- Handover with documentation and quality assurance

# Infra Network Services - Network IT Solution

## NW IT Solution

This service provides intelligent, data-driven solutions to enhance operational visibility and automation in telecommunications networks. It integrates application systems and analytics to optimize network performance, service delivery, and customer experience.

### Service Offered :

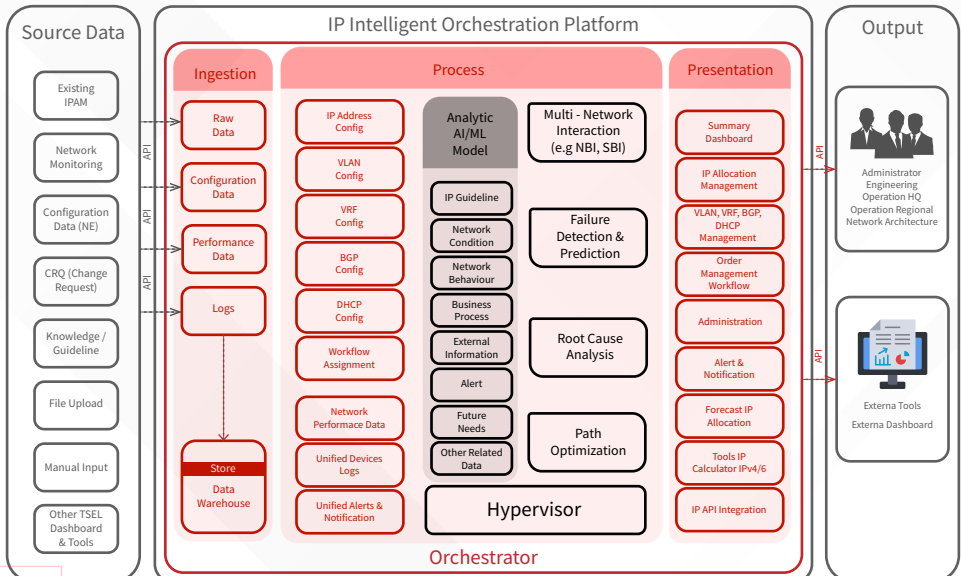

- Intelligent Fault Management Platform
- Workforce Management system
- Automation RAN Optimization
- Core CS/PS Autonomous Optimization
- Core DPI Autonomous
- Internet Service Monitoring & Benchmark Automation
- Datacomm Umbrella Fault Management Platform
- Datacomm Backbone Autonomous Optimization
- Network & Service Configuration Mgt, catalogue & Service Impact correlation mgt
- IP Intelligent Orchestration Management

### Scope of Work :

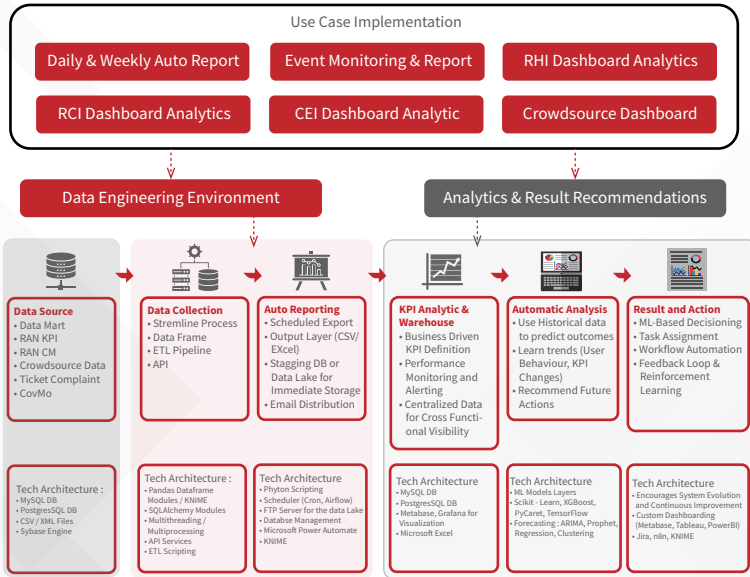

- Developing and integrating customized Network & service Autonomous solutions
- Monitoring network KPIs and user experience
- Supporting multi-platform, multi-vendor environments
- Enabling predictive and proactive network management

### Advantages :

- Real-time performance monitoring and reporting
- Streamlines operations and reduces manual effort
- Enhances decision-making with actionable insights
- Accelerates digital transformation for telecom operators

# Infra Network Services - Network IT Solution

## a. General Description

Renewable energy system supply and installation solutions such as :

- Solar PV
- Fuel Cell
- Hybrid System (Solar + Battery + Generator)

## b. Services Offered

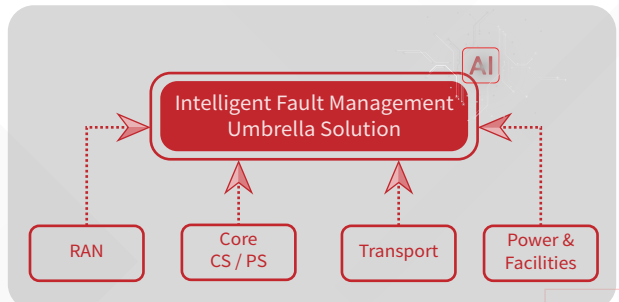

- Survey and System Design (engineering & system sizing)
- Procurement & installation of solar panels, battery, inverter, fuel cell
- Integration into existing system (grid/off-grid)
- Certification and commissioning

## c. Advantages

- Save Energy & Operational Costs
- Reduction of carbon emissions (ESG-oriented)
- Modular System and scalable
- Monitoring real-time base on cloud

## d. Case Study or Portfolio (Optional)

- ex : Solar Installation PV 5 kWp for 20 sites BTS Telkomsel in Kalimantan area

# Infra Network Services - Network IT Solution

## Development Application With Functionalities

### NAURA

Network Administration Automation Rollout and Acceptance is a modular apps to workforce on New Site Integration across Telco RAN Vendor

### RAN Sysinfo

RANSYS is an integrated database as main source of the RAN information

### CROKET

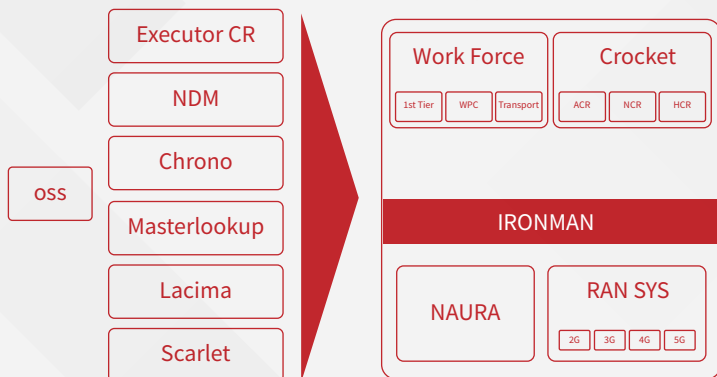

Change Request on Ticket will be launch as CR Generator nationwide. Every activity related to Change Request will be served by CROKET as main gateway.

### Workforces

Workforce to develop efficient process and workforce them in a proper manner related to 1st Tier Optim, Worst Performance Cell (WPC), RCI.

Provide capabilities to utilize AI (Artificial Intelligent) in order to find correlation KPI/KQI.

## IRONMAN - Integrated RAN Automation Solution

# Infra Network Services - Operation

## NW Optimization

Telkominfra offers advanced optimization services to maximize the quality and efficiency of network performance. This ensures superior user experience and supports the evolving demands of telecom networks.

### Service Offered :

- RAN Optimization
- Transport & Datacom Optimization
- Core & Application Layer Optimization
- Network Audit and Benchmarking

### Advantages :

- Improves coverage, capacity, and service quality
- Reduces network congestion and inefficiencies
- Provides measurable performance improvements
- Winning Benchmark Crowdsource Parameter
- Aligns with global telecom best practices

### Scope of Work :

- KPI-based drive tests and coverage analysis
- Parameter adjustment and tuning
- Comparative benchmarking with industry standards
- Engineering feedback and corrective implementation

## NW Operation & Maintenance

This service ensures continuous, stable operation of network & Service through preventive and corrective maintenance, supported by a 24/7 Integrated Operation Center (IOC) and nationwide engineering teams.

### Service Offered :

- Integrated Network Operation Center (NOC) & Service Operation Center (SOC) Operations
- Preventive & Corrective Maintenance RAN, Power, Core & Facilities
- Network & Service Event, Incident, Complain Handling Management
- Security, Power, and Facilities Monitoring

### Advantages :

- 24/7 network, service & Complain Handling surveillance & Demarcation via IOC
- Specialized teams for active and passive components
- Enhances network & Service availability and reliability
- ISO-certified service processes (ITIL, eTOM)

### Scope of Work :

- Network, Service & Complain Handling monitoring & Demarcation
- Routine site inspections and troubleshooting
- Real-time issue escalation and resolution
- Power management and fuel control

Integrated Operation Center

# Infra Network Services - Operation

## NW Reengineering

Network Reengineering is a strategic approach to restructure existing infrastructure for improved efficiency and cost-effectiveness. This includes dismantling obsolete sites, relocating equipment, and upgrading components of mobile operators.

### Service Offered :

- Site Decommissioning and Relocation
- Transport and Radio Migration
- Equipment Modernization and Spectrum Efficiency
- Asset Warehousing and Documentation

### Advantages :

- Optimizes infrastructure utilization
- Reduces operational costs and site redundancy
- Comprehensive national support across 11 regions
- Seamless coordination with customer asset systems

### Scope of Work :

- Tagging and dismantling equipment
- Transporting assets to warehouse
- Upgrading hardware (e.g., multiport antennas, LTE capacity)
- End-to-end project documentation and handover

## Sparepart Management

Telkominfra provides a comprehensive spare part management service, including repair, logistics, inventory optimization, and reporting. This enables telecom operators to minimize downtime and reduce operating costs.

### Service Offered :

- Spare Part Repair and Screening
- Logistics and Inventory Management
- Local Repair Center Operations
- Spare Part Reporting and Root Cause Analysis

### Advantages :

- Cost savings of up to 20% in spare part OPEX
- Reduces logistics and customs delays
- Transparent and traceable repair workflow
- Supports national scale operations with local repair hubs

### Scope of Work :

- Repair and return of faulty components within 24 hours
- Screening to identify repairable vs non-repairable parts
- Inventory pooling and cost optimization strategies
- Tracking and documentation through digital platform

# Project References INS Deploy & Ops

## NOC RAN

- Manage NOC and Automation
- RAN event and Incident Monitoring, Escalation and Report

## RAN Optimization

- Optimize RAN Coverage, Capacity, Quality Service and Productivity
- Crowd Event National Support
- Implement Optimization Workflow Automation With IRONMAN and Sysinfo

## RAN Reengineering

- Optimize Spectrum, RAN and infra-asset for Productivity and Cost Efficiency
- Low - Cost Investment Solutions
- High Capablity of New NE Deployment With Surrounding Optimization

## ENOM (Enhanced Network Operation Model)

- Improve Availability RAN
- RAN L0 and L1 Operation Excellence

## NPI Transport

- Improve Transport Service Performance
- Transport (Access) Service Performance Improvement

## TSA CNOP

- Manage Transport CNOP
- CNOP Transport Technical Support Assistance

- •
- •
- •
- •
- •

## NSPI (Network Service Performance Improvement)

- Improvement Customer Experience and Application Layer Service
- Core and Application Optimization Services for Core Packet Switch, Circuit Switch and IMS

## DPI Solman

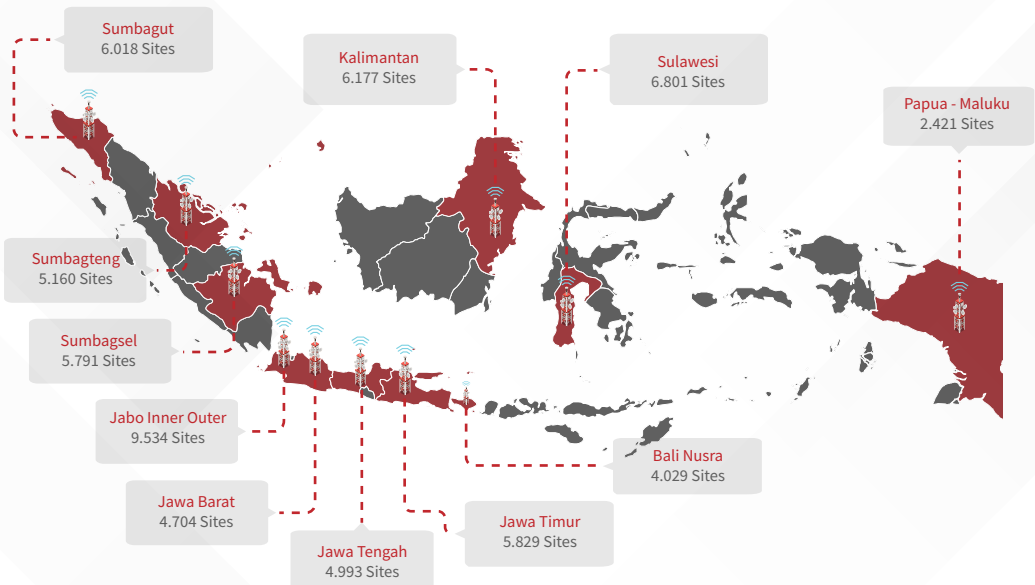

- Configure Core PS DPI to Support Product Implementation
- Core PS - Deep Packet Inspection Solution Management

# Infra Network Services

## Site Maintenance

\*as of 2024

ENOM (Enhanced Network Operation Model)  
Telkominfra only Manages two areas :  
Area 1 (Sumatra)  
Area 3 (Jawa Tengah, Jawa Timur, Balnus)

Site Maintenance  
(Including Power System, Rectifier, Battery,  
Electrical, Standby Generator)

61.457 Sites

📍 Telkom Landmark Tower, Tower 2, Lt 19,  
Jl. Jend. Gatot Subroto Kav. 52 Jakarta Selatan  
12710 - Indonesia.
